Dear Recruiter,

I am writing to express my interest in the Frontend Developer position at your organization. With over two years of experience building responsive and scalable web applications, I specialize in developing modern user interfaces using JavaScript, HTML, CSS, and React.js.

In my recent role as a Web Developer at Prime Investors Protection Association and League, I developed the frontend of a financial web platform and integrated real-time and historical NSE market data to deliver interactive dashboards for investors. I also designed reusable UI components for modules such as shares, bonds, and mutual funds, which improved maintainability and enhanced the overall user experience.

Previously, while working at Saansh Media, I built a stock broking web application using React.js and implemented key modules including login, dashboard, and portfolio management. I also improved navigation and usability by introducing search, filtering, and pagination features. My experience working with REST APIs, GraphQL, and backend technologies like Node.js and Express.js allows me to collaborate effectively in full-stack environments.

Beyond professional work, I have developed several projects such as a Capital Market Application, a Stock Broking Web Application, and a Tour and Travel platform, where I focused on building reusable components, responsive interfaces, and efficient data-driven dashboards.

I am passionate about creating intuitive and high-performance web applications and continuously improving my skills in modern frontend technologies. I would welcome the opportunity to contribute my technical expertise and problem-solving abilities to your development team.

Thank you for your time and consideration. I look forward to the possibility of discussing how my experience and skills align with your team's needs.

Sincerely,

Kapil Singh
